

We turn your ideas into products

The material of our AKUSTIX panels, recycled PET, has many exciting advantages. It is stable, light, easy to work with, to put together or glue.

Our new digital cutting machine represents a high-precision solution for PET processing. Thanks to digitally controlled blade technology, it produces quick, clean and deformation-free cuts, ensuring high quality even on complex geometries. The process automation reduces waste, optimizes production times, and ensures consistent results with precision, flexibility, and efficiency.

The versatility of the material, combined with cutting-machine technology, allows us to create custom-made projects for your space.
